Residing in Bishkek,
Kyrgyzstan

Relevant summary

A knowledgeable and certified engineer in several cybersecurity fields. I have a natural security mindset and basic understanding of machine learning. Familiar with some of MIRI's publications.

Strongly concerned about the safety of the world due to the development of unfriendly AI.

Understanding that AI will be used on the internet for malicious purposes on an unprecedented scale, I plan to develop an AI-based system, that will autonomously examine applications for vulnerabilities (vulnerability research & ethical bug hunting). I expect the course will help me better understand the complexities and dangers in this field. I also hope that my experience will be valuable to people in the group who don't have a background in cybersecurity

Relevant work experience

Obelis LTD, Cyprus / remote

May 2022 – current time

Senior DevSecOps & application security engineer

- security systems architecture & development
- vulnerability research
- application audits and penetration tests

Gazprom Neft, Russia

Jan 2021 – May 2022
